Products and Services

Specializing in solar energy, wind and hydro turbines, efficient lighting systems, water conservation technologies

Date of Case Study

September 3rd, 2008

Achievements

Grün-Sol is a young Fredericton-based business with contracts throughout New Brunswick and Nova Scotia. They specialize in renewable energy technologies and water conservation. Apart from the large scale deployment of wind turbines, hydro turbines, solar panels, and grey water recycling systems, Grün-Sol also focuses on water heating, recycling technologies, and efficient lighting systems for residential and commercial properties. Grün-Sol's products, services, and knowledge base make them a leader in the ever-developing field of renewable energy.

Grün-Sol is currently planning their first office space/store-front. As per their expertise, they will ensure that their retail space employs cutting edge technologies such as solar water heaters, grey water recycling, Solar thermal heating, and a varied mixture of renewable energy sources. Such a commitment will warrant numerous Fredericton Green Shops credits upon completion and possibly launch them into Gold Member status. At this point, Grün-Sol has been awarded 4 program credits for their provision of environmentally certified products and services.

Grün-Sol is a local business with great potential and we expect them to make a significant contribution to helping reduce Fredericton's environmental impact.

Actionable Items Currently Implemented:

1. Provision of environmentally certified products and services.
